

Freddie Mac Insight: Seniors Who Are Aging in Place Hold 1.6 Million Housing Units Off the Market

February 6, 2019

MCLEAN, Va., Feb. 06, 2019 (GLOBE NEWSWIRE) -- [Freddie Mac](#) (OTCQB: FMCC) released its [February Insight](#), which sheds light on a key factor that contributes to today's housing shortage: seniors choosing to age in place. This shortage of available homes has been identified as an important barrier to young adults buying their first homes.

"We estimate that approximately 1.6 million more senior households are staying in place than would have been the case if they had behaved like previous generations of homeowners," said Sam Khater, Chief Economist at Freddie Mac. "For scale, 1.6 million units is roughly the same as the number of new single-family and multifamily housing units built each year, and it represents more than half of the current shortfall of 2.5 million housing units that we estimated in our December [Insight](#)."

"We believe the additional demand for homeownership from seniors aging in place will increase the relative price of owning versus renting, making renting more attractive to younger generations," added Khater. "This further highlights the importance of addressing barriers to the production of new housing supply to help accommodate long-term housing demand."

Insight Highlights

- Seniors born after 1931 are staying in their homes longer, and aging in place, resulting in higher homeownership rates for this group relative to previous cohorts.
- We estimate that 1.1 million existing homes have been held off the market through 2018 by those born between 1931 and 1941. We estimate that another 300,000 are being held off the market by those born between 1942 and 1947, and another 250,000 are being held off the market by "Baby Boomers" born between 1948 and 1958.
- To provide context for the 1.6 million existing homes being held off the market due to seniors aging in place, the Urban Institute recently estimated that [3.4 million millennials](#) are missing out on homeownership.
- The trend of seniors aging in place is likely to grow as both the number of seniors increases and the barriers to aging in place are reduced.
- More older Americans [prefer to age in place](#) because they are satisfied with their communities, their homes, and their quality of life.

Freddie Mac makes home possible for millions of families and individuals by providing mortgage capital to lenders. Since our creation by Congress in 1970, we've made housing more accessible and affordable for homebuyers and renters in communities nationwide. We are building a better housing finance system for homebuyers, renters, lenders and taxpayers.
